- ❖ Dissemination of output from the parallel GFS will begin with the 1200Z cycle on March 24. Note that this is not the official start of the 30-day IT stability test. The 30-day stability test will likely begin the week of March 28.

**C. Proposed upcoming NCO RFC(s) with potential Enterprise effect:**

- ❖ Allow 6 specific users from NHC to have remote VPN access to NCEP DMZ which will enable them to access Harris GRB/ Himawari systems, a total of 7 sites. There will be specific VPN pool addresses created for this task. To be implemented on March 28 at 1600Z.
- ❖ Modify the DBNet systems on WCOSS and NCOSRV to begin routing multiple Storm Prediction Center grib2 products to the AWIPS2 systems (CTBN/NTBN/OPCN/HPCN). The SREF products (awcsref) will be sent from WCOSS, and the calthunder products will be sent from NCOSRV. This is at the request of OPC. To be implemented on March 28 at 1400Z.
- ❖ Update Verification Web Tool WAR files using the new files in a CPC developer's 'vwt.war' file. The WAR files contain added code to improve the communication with the front end, which will ease the transition when the Java front end is removed and the servlet is called through AJAX requests. Requested by CPC. To be implemented on March 30 at 1500Z.
- ❖ Moved the CPC model volume to the phase 2 netapp and increase its size. The volume /cpc/prcp2 was running out of space on the phase 1 netapp. Accelerated and implemented on March 23 at 1400Z.
